

You are continuing the existing Himo Pay product design.

Do NOT redesign the brand from scratch.

Continue the exact visual language already established in the previous Himo Pay authentication screens.

===== 01. HOME SCREEN OBJECTIVE
=====

Design the main Himo Pay Home Screen.

The Home Screen must feel like the central command center of a modern mobile wallet.

Primary goals:

- See balance immediately
- See membership points immediately
- Send money quickly
- Cash In quickly
- Cash Out quickly
- Access everyday services
- Discover Himo events / campaigns
- Access account and notifications
- Maintain a calm, premium and uncluttered experience

The screen must NOT feel like a traditional banking dashboard.

It should feel:

- Simple
- Premium
- Calm
- Fast
- Human
- Trustworthy
- Modern

===== 02. BRAND FOUNDATION
=====

Product: Himo Pay

Primary Brand Color: Himo Warm Sand / Champagne

Primary:

C8A978

Primary Dark:

A88752

Primary Soft:

F3EBDD

Core Black:

0A0A0A

Soft Black:

171717

White:

FFFFFF

Neutral:

737373

D4D4D4

F5F5F5

Light Background:

FAFAF8

Color rule:

Black + White + Neutral = dominant visual foundation.

Himo Warm Sand = controlled brand accent.

Do NOT make the entire Home Screen warm sand.

Do NOT use:

- Blue
- Purple
- Bright green
- Aggressive red
- Random colorful icons

Use the primary color strategically.

===== 03. HOME SCREEN INFORMATION
ARCHITECTURE =====

Exact hierarchy:

TOP HEADER ↓ BALANCE CARD + MEMBER POINTS ↓ PRIMARY MONEY ACTIONS Send Cash In Cash Out ↓
SERVICES ↓ EVENT / CAMPAIGN ↓ BOTTOM NAVIGATION

Do not add unnecessary sections.

===== 04. TOP HEADER
=====

Create a clean top header.

Left:

Himo Pay greeting / user identity.

Example:

Good morning, Htet

or:

Good evening, Htet

Keep the greeting subtle.

Right:

Notification icon Profile / account avatar

Use monochrome Himo iconography.

The header must not consume excessive vertical space.

Maintain comfortable top safe-area spacing.

===== 05. BALANCE CARD
=====

The Balance Card is the primary visual element of the Home Screen.

Show:

Available Balance

125,000 MMK

Include:

Member Points

2,450 pts

The Member Points must feel like part of the user's Himo membership identity, NOT like a random rewards advertisement.

Possible structure:

Available Balance

125,000 MMK

Himo Points 2,450 pts

Create strong hierarchy:

Balance = largest

Points = secondary

Do not make points compete visually with the actual money balance.

Include a subtle visibility control:

Show / Hide balance

Use a simple monochrome eye icon.

The card can use:

- Black
- Soft black
- White
- Very subtle Warm Sand accent

Avoid excessive gradients.

===== 06. MEMBER POINTS
=====

Define a reusable Himo Points visual language.

Name: Himo Points

Possible future uses:

- Rewards
- Cashback
- Partner offers
- Events
- Membership benefits

Do not introduce complicated loyalty mechanics yet.

The Home Screen only needs to communicate:

"My account has money + I also have Himo Points."

The points indicator should feel premium and understated.

===== 07. PRIMARY MONEY ACTIONS
=====

Immediately below the Balance Card create three primary actions:

1. Send
2. Cash In
3. Cash Out

These are the most important actions after viewing the balance.

Use a clean horizontal action group.

Example:

[Send] [Cash In] [Cash Out]

Each action should contain:

Monochrome filled icon Label

Use Himo Warm Sand only for:

- selected state
- subtle interaction
- important active state

Do not use three different colors.

All three actions must feel like one system.

===== 08. SEND
=====

Send money action.

Icon: Use a custom Himo-compatible filled transfer/send icon.

Label: Send

Interaction: Tap → Send Money flow

The Home Screen should make this action immediately discoverable.

===== 09. CASH IN
=====

Cash In means adding money to the Himo wallet.

Potential future methods:

- Bank transfer
- Agent
- Linked account
- QR

- Other supported methods

For this Home Screen:

Only show:

Cash In

Do not expose all methods yet.

===== 10. CASH OUT
=====

Cash Out means withdrawing money from Himo.

For Home:

Show only:

Cash Out

Keep the interaction simple.

===== 11. SERVICES SECTION
=====

Below Send / Cash In / Cash Out, create:

Services

This is the secondary feature discovery area.

Do NOT put too many services on the first row.

Use a clean grid.

Initial services may include:

- Scan & Pay
- Mobile Top Up
- Bills
- Bank Transfer
- QR Payment
- Transactions
- Cards
- More

Use monochrome filled icons.

Every service icon must follow the same Himo icon language.

Do not use emoji.

Do not give every service a different color.

===== 12. SERVICE GRID UX =====

Recommended:

4 items per row.

Example:

Scan & Pay Top Up Bills Transfer

Second row:

Cards History Rewards More

Keep the Home Screen compact.

If the service list becomes too long, use:

See all

rather than creating a giant dashboard.

===== 13. EVENT / CAMPAIGN SECTION =====

Below Services:

Events

Create a premium campaign card.

This section is designed to showcase:

- Himo events
- Partner collaborations
- Cashback campaigns

- Seasonal campaigns
- Merchant promotions
- New features

Use Himo's photography + illustration art direction.

Example:

Himo × Partner

Weekend Rewards

Earn extra Himo Points when you pay with Himo Pay.

[Explore]

Use a large visual area with carefully controlled typography.

The campaign should feel editorial and premium.

Do NOT make it look like an aggressive advertisement.

===== 14. NANO BANANA VISUAL ASSET SYSTEM
=====

IMPORTANT:

Create the visual assets separately using Nano Banana.

Do NOT generate random images directly inside the UI.

Every generated asset must follow the same Himo Pay visual identity.

Create a reusable visual asset library.

Asset categories:

A. Campaign Photography B. Lifestyle Photography C. Fintech Illustrations D. Service Illustrations E. Empty State Illustrations F. Event Graphics G. Abstract Brand Graphics

===== 15. NANO BANANA — CAMPAIGN
PHOTOGRAPHY PROMPT =====

Use this prompt in Nano Banana:

"Create a premium editorial fintech campaign photograph for an original Myanmar digital wallet brand called Himo Pay.

Scene: A young Myanmar adult naturally using a smartphone to make a digital payment in a modern café.

Visual mood: Calm, confident, premium, authentic, contemporary.

Photography: Natural daylight, realistic skin texture, subtle cinematic lighting, soft contrast, clean composition, editorial photography, realistic depth of field.

Composition: Leave intentional negative space for campaign typography. Subject positioned slightly off-center. Mobile phone clearly visible but not oversized. Clean modern environment.

Color direction: Neutral black, white, warm beige and subtle champagne-gold tones. Use Himo Warm Sand #C8A978 as a subtle visual accent only.

Avoid: Generic stock-photo appearance, fake corporate smiles, excessive saturation, neon colors, blue fintech styling, purple, bright green, aggressive red, unrealistic skin, excessive props, cliché banking imagery.

The image should feel like a premium campaign from an original fintech brand, not an existing company's advertisement.

No text. No logos. No watermark."

Generate multiple compositions:

- Subject left / text space right
- Subject right / text space left
- Center composition
- Close-up payment moment
- Wider lifestyle scene

===== 16. NANO BANANA — HIMO ILLUSTRATION
PROMPT =====

Use this prompt:

"Create an original illustration system for Himo Pay, a premium modern Myanmar digital wallet.

Style: Minimal geometric fintech illustration. Elegant, calm, sophisticated and human.

Visual language: Soft geometric forms, controlled curves, simple objects, strong negative space, subtle depth, clean silhouettes.

Color palette: Black #0A0A0A White #FFFFFF Warm Sand #C8A978 Soft Warm Sand #F3EBDD Neutral gray.

Use Warm Sand sparingly.

Create reusable illustrations for:

- QR payment
- Sending money
- Cash In
- Cash Out
- Rewards / points
- Security
- Verification
- Events
- Empty states

Do NOT use: 3D blobs Generic startup illustrations Random cartoon characters Emoji Excessive gradients Neon colors Blue Purple Bright green Aggressive red

The illustration system must feel uniquely designed for Himo Pay and remain visually consistent across the mobile app.

No text. No logo. No watermark."

===== 17. NANO BANANA — EVENT VISUAL PROMPT
=====

Create a reusable Himo Pay event visual.

Prompt:

"Create a premium digital campaign visual for Himo Pay.

Concept: Everyday digital payment rewards.

Visual: A modern Myanmar lifestyle scene combined with subtle geometric Himo brand graphics.

Mood: Premium, calm, optimistic, modern.

Palette: Black, white, warm beige, champagne-gold.

Accent: Himo Warm Sand #C8A978.

Composition: Large clean visual area. Strong negative space. Editorial fintech campaign aesthetic. Designed to sit inside a mobile wallet Event card.

No text. No logo. No watermark. No generic stock photography. No excessive decorative elements."

===== 18. VISUAL CONSISTENCY RULE
=====

All photography and illustrations must feel like they belong to the SAME brand.

Maintain consistency in:

- Lighting
- Contrast
- Composition
- Color temperature
- Negative space
- Geometry
- Accent color
- Visual density

Do not mix: 3D illustration + flat illustration + random photography + cartoon artwork.

Choose one coherent visual language.

===== 19. BOTTOM NAVIGATION
=====

Create a simple bottom navigation.

Initial navigation:

Home Payments Activity Rewards Account

Use monochrome filled icons.

Active Home state:

Warm Sand accent.

Inactive:

Neutral / white depending on theme.

Do not use multiple icon colors.

===== 20. RESPONSIVE MOBILE DESIGN
=====

Primary widths:

390px 393px 360px 320px minimum

The Home Screen must remain clean at 320px.

No:

- Horizontal scrolling
- Text overflow
- Cropped cards
- Broken grids
- Tiny labels
- Overlapping elements

At narrow widths, adapt spacing intelligently.

Do NOT simply shrink the entire interface.

===== 21. HOME SCREEN SCROLL BEHAVIOR =====

The Home Screen should be vertically scrollable.

Top header can remain static or use subtle sticky behavior.

Recommended hierarchy:

Header Balance Primary actions Services Events

Do not make the campaign section push important money actions too far down.

The user's money should always be the priority.

===== 22. COMPONENT SYSTEM =====

Create reusable components for:

- Header
- Balance Card
- Points
- Action Button
- Service Item
- Service Grid
- Event Card
- Campaign Card
- Bottom Navigation

- Notification
- Profile
- Visibility Toggle

States:

Default Pressed Active Disabled Loading Error Success

===== 23. MOTION
=====

Add subtle motion.

Balance: Smooth reveal.

Visibility: Elegant number fade / transition.

Primary actions: Subtle press feedback.

Service: Small scale / opacity interaction.

Event: Subtle image movement or card transition.

Bottom navigation: Smooth active-state transition.

No excessive bounce.

No flashy animation.

===== 24. UX PRIORITY
=====

Priority order:

1. Balance
2. Send / Cash In / Cash Out
3. Services
4. Events
5. Rewards / Points
6. Secondary discovery

Never allow promotional content to dominate essential financial actions.

===== 25. FINAL DESIGN QUALITY
=====

The final Home Screen should feel:

"Premium fintech + everyday Myanmar usability."

It should NOT feel:

- Corporate banking
- Generic wallet template
- AI-generated dashboard
- Overdesigned Dribbble concept
- Crypto wallet
- Gaming rewards app

Use inspiration from modern fintech UX patterns, but create a completely original Himo Pay product identity.

Before finalizing:

Check every spacing value. Check typography. Check alignment. Check balance hierarchy. Check point hierarchy. Check icon consistency. Check campaign composition. Check responsive behavior. Check 320px layout. Check accessibility. Check visual consistency with the existing Splash / Authentication screens.

The final result must feel like the next screen of the SAME Himo Pay product.
